National Policy on Ambulance Use and Services. Required Equipments, Supplies and Medicines. Template for Logbook. Personnel of Ambulance. Annual Statistical Report. Standards on Ambulance Services. Evaluation of the Ambulance Service. Feedback on Ambulance Service. Control of Documents and Records. Ambulance Service is defined as a vital health service for the delivery of pre and post hospital care to patients, from the site of incident to the emergency room of the appropriate receiving hospital for definitive care. It is also for transfer of the patient to another hospital for further diagnostic and treatment. All medical centers are expected to provide ambulance services either in-house or out-house or outsourced. The Ambulance Management System includes transporting the patient from the incident site to the emergency room of the receiving hospital for definitive care, transferring the patient to another hospital for further diagnostic and treatment purposes and, as a special health service, rendering emergency medical care and life support to sustain the stability of the patient in transit to and from the hospital. This means that support should be considered in the design and development of the Quality and Safety Management System of Salubris Medical Center. The ultimate objective of Ambulance Management System is to have a support management system in order to continually achieve its vision, mission, goals and objectives effectively and efficiently. Risk Management Threats and Opportunity Ensure achievement of objectives of the Ambulance Management System whether in-house or outsourced Ensure reliability and provision of quality and safe services by the Ambulance Management System whether in-house or outsourced. Avoid medico-legal or legal suits in the process of providing ambulance services from all potential causes. Avoid financial losses in ambulance services from all potential causes. Patient needing ambulance service land ambulance Request for ambulance service Approval for ambulance service Booking schedule for ambulance service Pre-ambulance service preparations Transport Arrival at destination Request for ambulance service. Provide contact numbers and location of office providing and processing requests for

ambulance services in-house or out-house. Approval of request for ambulance service. Approval for request for ambulance service will be guided by the policies of Salubris Medical Center on ambulance services. Ambulance services shall be used to conduct patients from Salubris Medical Center to outside the medical center, either to another medical institution or to residence of patients. Decide whether to continue or to terminate contract management and agreement. Out-bound; in-bound? In-transit near-death? In-transit medical challenges? In-transit non-medical challenges? Client Feedback. The End. Date of Release Prepared By Approved by. Ambulance is defined as a vehicle designed and equipped for transporting sick or injured patients to, from, and between places of treatment by land, sea or air, affording safety and comfort to the patients and avoiding aggravation of illness or injury. Purpose of Manual The Manual shall contain the documented information on the Ambulance Management System that will serve as a guide for internal and external stakeholders of Salubris Medical Center. Processes Create a Task Team. Policies: Ambulance services shall be used to conduct patients from Salubris Medical Center to outside the medical center, either to another medical institution or to residence of patients. Arrival at destination Endorsement to receiving units other medical institutions, receiving unit and staff at Salubris Medical Center, guardians at residence of patients; etc. Registry: How many patients provided ambulance services per day, per month, per year? Medtec Ambulance Wiring Diagrams â€" wiring diagram is a simplified enjoyable pictorial representation of an electrical circuit. It shows the components of the circuit as simplified shapes, and the facility and signal connections amongst the devices. A wiring diagram usually gives guidance more or less the relative slope and accord of devices and terminals upon the devices, to support in building or servicing the device. A pictorial diagram would fake more detail of the inborn appearance, whereas a wiring diagram uses a more figurative notation to stress interconnections on top of being appearance. A wiring diagram is often used to troubleshoot problems and to create clear that every the contacts have been made and that whatever is present. Architectural wiring diagrams fake the approximate locations and interconnections of receptacles, lighting, and long-lasting electrical services in a building. Interconnecting wire routes may be shown approximately, where particular receptacles or fixtures must be on a common circuit. Wiring diagrams use usual symbols for wiring devices, usually rotate from those used upon schematic diagrams. The electrical symbols not lonesome appear in where something is to be installed, but next what type of device is subconscious installed. For example, a surface ceiling well-ventilated is shown by one symbol, a recessed ceiling lively has a rotate symbol, and a surface fluorescent open has choice symbol. Each type of switch has a oscillate story and as a result do the various outlets. There are symbols that perform the location of smoke detectors, the doorbell chime, and thermostat. A set of wiring diagrams may be required by the electrical inspection authority to espouse association of the habitat to the public electrical supply system. Wiring diagrams will with add up panel schedules for circuit breaker panelboards, and riser diagrams for special facilities such as flame alarm or closed circuit television or additional special services. During an emergency, what exactly goes on inside an ambulance? What do paramedics use to attend to injured or sick patients? It is extremely important to act fast to ensure you get treated as quickly as possible. That ambulance will be well-equipped with advanced medical equipment to assist in the management of an extremely injured or sick person. But what equipment is there, exactly? And what do they do? Fitted with various gadgets and equipment, modern ambulances are a marvel of technology. When you call for an ambulance, paramedics will be on hand to provide emergency care to you or the injured or ill patient. These dedicated individuals are trained healthcare professionals, and will have gone through intensive training to learn how to stabilise a patient in a medical emergency such as a cardiac arrest or brain injury. A jump bag is used to carry medical supplies such as basic life support and trauma kits. When paramedics reach the scene of an emergency, they usually grab this first. A jump bag often contains basic but important medical items like bandages, drips, medication and syringes. A BVM is a device connected to a mask that will be placed over your mouth to provide ventilation. If your breathing difficulties are the result of fluid blocking your airway, the paramedic may also use a suction tube down your windpipe to gently remove the fluid. Otherwise, air may not be able to reach the part of the lungs where oxygen gets absorbed into the bloodstream. The paramedic will strap you to a trauma board if there is a possibility of a spinal bone injury or dislocation. They may first use a scoop stretcher to pick you up from the floor before placing you on the trauma board. As an added precaution, the paramedic may also use a lightweight head immobiliser an equipment that supports and protects your head and neck. If the paramedics suspect a neck or head injury, they may also use a device called a cervical collar. This features an inflexible frame that fits around your neck, held securely with Velcro straps. Perhaps it goes without saying that paramedics carry certain pain-relieving and life-saving medications on board! This lightweight, padded bag has several pouches and elastic straps to keep medications organised. These usually include:. They can use this to look for abnormal patterns, known as arrhythmias, when the heart is beating too fast, too slow or with an irregular rhythm. This advanced life support machine will be packed into the ambulance if the patient's condition requires it. The machine is attached to an oxygen cylinder to help you take in oxygen. The paramedic will also be able to adjust the rate and depth of your breathing, if it's necessary. The paramedic will be able to use this device to take a quick reading of your blood glucose level by placing a small drop of your blood on a disposable strip, which will be inserted into the device. The number on the screen will indicate your blood glucose level. If the reading is too high or too low, the paramedic will try to stabilise your condition with medication. If you're unable to walk, the paramedic will use this padded cot to move you from the scene. In addition to advanced medical equipment, you'll also find inside an ambulance basic but important items such as blood pressure gauges, stethoscopes, thermometers, medical tapes, flashlights and blankets, to ensure the paramedics are prepared for almost any situation! As a precaution, you should always have emergency numbers on speed-dial. Bag-Valve-Mask Ventilation , March Optimal Use of Emergency Services n. The History of Ambulances n. Gastroenteritis or the stomach flu is a viral or bacterial infection that causes irritation and inflammation of the stomach and intestines. Children can develop allergic reactions to food. This article discusses the symptoms and treatment of food allergy and differentiates food allergy from food intolerance. Cystoscopy is a procedure done to evaluate your urinary bladder and urethra. You can prepare for this procedure by understanding what it is for and how it is done. Due to the demands of dancing, it is no surprise that more than half of the injuries dancers sustain are to the foot and ankle. Falls and accidents are part of growing up, but they can get serious. This makes it crucial that parents know how to spot the signs of a fracture and seek medical attention early. Here are 4 orthopaedic conditions in children to be aware of. Minor burns are usually not serious and can be treated at home. Read on to find out how to care for your burn. If you experience pain or pass blood as you pee, you might have picked up a urinary tract infection. This unpleasant condition can be effectively treated if discovered early. Learn how to tell if your red, itchy eyes are due to an allergy or an infection and the different ways to treat them. What are kidney stones and are they a serious condition?

Introducing your child to swimming at a young age can be beneficial. However, there are many dangers that come with swimming. Learn the signs of danger and what to do. If your family member falls, what should you do? What happens when your baby has taken too much medicine?
