Accessories for the DeVilbiss VR Trying to locate the coupler part number D Antonio for model number VR asked on Hi Antonio, Thank you for your question. The coupler, part number D, has been discontinued by DeVilbiss and you will need to contact them for information on a replacement part. Their telephone number is If they provide you with a part number for the replacement part, you may call us back with it and we can verify if we have it available for you. You may also be able to locate the part you need by trying the following: Using a search engine to type your part number and see if other retailers still have this part in stock. Visiting online stores such as eBay and finding sellers that have this part. Trying retailers and repair stores in your local area to see if they have the part in their inventory. Talking to a local repair technician, who may have the part you need, or may be able to repair your existing part. I hope this helps. Thank you and have a great day! Did this question help you? Yes No. Ask a question. Ask our experts a question about this part and we will respond as soon as we can. Join our VIP email list to receive money-saving-advice and special discounts. Model Number Recommended. Submit your question. Thank you for your question! Our experts will get back to you as soon as they can. Ask Another Question. Continue Shopping. Discussion is closed. Question: Pump Removal VR surbeagle. Hello , I don't know of any instructions for the removal of the A Pump. By looking at the parts diagram, it looks as if the item number 1, part number D Engine Couple Shaft, is threaded on the inside, and it looks like the item number 18, part number D Bolt would have to be removed, then I would think that if you remove the screws from the pump plate that connects it to the engine, with a little encouragement the pump would come off. Accessories for the DeVilbiss VR The hose from washer broke off at the machine. I need a new hose. Robert asked on Hello Robert, thank you for your inquiry! The high pressure hose for your model VR is part number I hope this information helps! Related Parts: High Pressure Hose. Did this question help you? Yes No. VR Excell 6. George for model number VR asked on Hello George, Thanks for your question! The engine in your unit was actually made by a different manufacturer; consequently, the replacement parts for your engine are listed under the engine's model number. We hope this helps! The spray wand broke. Says on line it is no longer available. How do I get a replacement part? Mike for model number VR asked on Hello Mike, Thanks for your question! When parts show to be discontinued by the manufacturer. This means the manufacturer doesn't make this part anymore. There are no substitute parts made by the manufacturer to replace this part. There is no longer any way for us to find this part and stock it in our warehouse. We recommend using a search engine and type in the part numbers and see if other retailers still have this part in stock, visiting online stores such as eBay and finding sellers that have this part. Trying retailers and repair stores in your local area to see if they have the part in their inventory. Talking to a local repair technician, who may have the part you need, or may be able to repair your existing part. You can also try reaching out to Devilbiss at to see what their recommendations are for replacing this part. Antonio for model number D asked on Hello Antonio and thanks for writing. For more specialized assistance or to speak with someone about this, we would suggest calling the manufacturer of the unit directly. Once you get the information you need, we should be able to find the information on our site for you. Hope this helps According to our database, the model number you provided is just a portion of a model number with multiple possible variations. To ensure that we recommend parts that will work for your model, please check your information again; you will need to provide us with the full model and serial numbers located on the sticker on the unit itself. Once we have that information, we would be happy to find the part you need. The metal cover over the exhaust is broken off I need a replacement but I can't find it on your website purse list. Dennis for model number Vr asked on Hello Dennis, thank you for your inquiry. The part you described does not appear in the parts list for this model. Please reach out to DeVilbiss directly to obtain the part number you need to order. Once you have this information, please feel free to check back with us for pricing and availability information. Thank you. Ask a question. Ask our experts a question about this part and we will respond as soon as we can. Join our VIP email list to receive money-saving-advice and special discounts. Model Number Recommended. Submit your question. Thank you for your question! Our experts will get back to you as soon as they can. Ask Another Question. Continue Shopping. Discussion is closed. Question: Pressure jeremy. I can't get any pressure coming out of the nozzle. What could that mean? Hi Jeremy, There are several things that can cause a low pressure condition. The most common is an insufficient water supply. Make sure that the inlet filter is not plugged with dirt, grass, leaves, spider web, etc. Make sure that the faucet being used is capable of supplying enough water. Most manufactures recommend a water source that is at least double the output of the pressure washer. So if your pressure washer outputs 2. The second most common issue causing lack of pressure are the nozzles themselves. The nozzles are where the high pressure is generated. The nozzles can wear out over time. The nozzles will wear out faster if your water has a high mineral content, such as calcium. The mineral acts like sandpaper and will slowly enlarge the openings of the nozzles. It doesn't take much wear to reduce the pressure of a nozzle. Problems inside of the pump can also cause low pressure. A plugged or damaged unloader valve can cause low pressure. Damaged or pitted valves inside the pump can cause low pressure. Any dirt inside of the pump can plug parts of the pump and cause low pressure. If dirt has entered the pump it can quickly wear out the pump components. In this case the pump would need to be replaced. I hope this helps with your repair! I am currently working on a VR and assumed that the pump was bad. After removing the bottom skirting and trying to figure out what was needed to remove the pump to change the seals, I happen to look

up and saw that the set screw that holds the pump to the motor was missing. Replaced the set screw and was back in business. Hello Profnohair That is great. Sometimes, just the simplest of things can make a huge difference. Good eye on that, and good luck with all your future repairs. Sign up. Thank you! Your email, , has been added to our mailing list.
